SUMMARY

Since I learn about IT and printed "Hello world!", I knew that is my path and I became passionate about IT and the technologies behind it, I became addicted to building and developing new software and learning the latest technologies, and improving my skills. I also have a good knowledge of Graphic Design.

SKILLS & TECHNOLOGIES

Adobe Creative Suite
Git & Github
HTML & CSS (SASS & bootstrap)
JavaScript (ES6+)
Node js
React js
Relational Database (SQL)

"The road to success is always under construction."

PROJECTS

Weather App [see code](#) [see live](#)

Responsive weather app. This project is inspired by Microsoft weather. I used the API from weatherapi.com. By default, the weather is in your position. You can also search for a specific city and you have the ability to pin it in your local storage and remove it. the weather information contains hourly and 3-day forecasts with the ability to change the unit system (Metric / American). For the summary graph, I used Chart.js. it took me 2 weeks to finish.

blog [see code](#)

anyone can create an account and publish an article. posts can be updated, deleted, and like. A user can update his name, password, and delete his account. If a user delete his account, all his posts and likes will be deleted too. I used express js, passport js (local authentication strategy), mySQL, EJS, and CSS.

Mangiare [see code](#) [see live](#)

A restaurant website with different pages styles. I used HTML, SASS, and JavaScript.
